I	Introduction	1
1	Monitoring and Control	3
1.1	Introduction	4
1.2	Issues in monitoring and control	6
1.3	Research and design approach	8
1.4	Thesis outline	11
2	Intelligent Products	15
2.1	Introduction	16
2.2	What are intelligent products	20
2.3	Technologies enabling intelligent products	26
2.4	Goals of intelligent products	38
2.5	Conclusions and future trends	47
2.6	Addendum	49
II	Monitoring and Control in Production	55
3	System Architecture for Production	57
3.1	Introduction	58
3.2	Background and related work	60
3.3	Problem analysis	63
3.4	System architecture	65
3.5	Conclusions	70

CONTENTS

4	System Prototype for Production	73
4.1	Introduction	74
4.2	Background	75
4.3	Methodology	77
4.4	Prototype implementation	79
4.5	Simulation results	87
4.6	Conclusions	89
III	Monitoring and Control in Transportation	91
5	System Architecture for Transportation	93
5.1	Introduction	94
5.2	Problem analysis	96
5.3	System architecture	100
5.4	Evaluation	106
5.5	Conclusions	109
6	System Prototype for Transportation	111
6.1	Introduction	112
6.2	Related work	113
6.3	Methodology	115
6.4	Problem identification	121
6.5	Design principles	126
6.6	Evaluation	129
6.7	Conclusions	138
IV	Discussion	141
7	Summary and Discussion	143
7.1	Research findings and contributions	143
7.2	Discussion and future work	146
	Bibliography	151

V	Appendices	175
A	TAC SCM simulation results	177
B	Smart Objects System	179
B.1	System overview	180
B.2	System structure	181
B.3	System behaviour	186
B.4	Screenshots	188
