Selectivity Enhancement in Capillary Electrokinetic Separations via Chiral and Molecular Recognition

Application in Bioanalysis and Pharmaceutical Analysis

*Where scientists know that if they go in a certain direction
and if they hang on to the right process, they will come closer to their goal,
politician does the opposite: they decide where they want to go
and they try to go there by turning the process that could have made them clear,
never to aim for that goal anyhow.*

*John Cleese in 'Life and how to survive it'
by Robin Skynner and John Cleese (1993)*

Contents

1. Introduction	1
1.1 History and development of capillary electrophoresis	2
1.2 Modes of capillary electrophoresis	5
1.3 Peak broadening	6
1.4 Proposed mechanisms for chiral and molecular recognition	7
1.5 Regulatorial perspective to chiral separations	9
1.6 References	10
2. Selectivity in capillary electrokinetic separations	15
2.1 Introduction	16
2.2 Selectivity principles	20
2.3 Resolution	47
2.4 Chemometrics as a tool for the optimization of selectivity in CE	52
2.5 Discussion	53
2.6 Conclusions	58
2.7 Acknowledgements	58
2.8 References	59
3. Scope of the thesis	69
4. Determination of the enantiomeric purity of (–) terbutaline by capillary electrophoresis using cyclodextrins as chiral selectors in a polyethylene glycol gel	73
4.1 Introduction	74
4.2 Experimental	75
4.3 Results and discussion	78
4.4 Conclusion	84
4.5 Acknowledgements	85
4.6 References	85
5. Modeling of conditions for the enantiomeric separation of β_2-adrenergic sympathicomimetics by capillary electrophoresis using cyclodextrins as chiral selectors in a polyethylene glycol gel	87
5.1 Introduction	88
5.2 Experimental	91
5.3 Statistical methods for experiments	93
5.4 Results and discussion	93

5.5 Conclusion	98
5.6 Acknowledgements	98
5.7 References	99
6. Tuning of the selectivity in capillary electrophoresis by neutral cyclodextrins illustrated by the (non-) chiral separation of some structurally related phenothiazines	101
6.1 Introduction	102
6.2 Experimental	105
6.3 Results and discussion	107
6.4 Conclusion	112
6.5 References	113
7. The use of charged cyclodextrins in capillary electrophoresis for chiral separations in pharmaceutical analysis	115
7.1 Introduction	116
7.2 Theoretical aspects	120
7.3 Synthesis and characterization of charged cyclodextrins	123
7.4 Applications of anionic cyclodextrins in CE	129
7.5 Applications of cationic cyclodextrins in CE	137
7.6 Applications of amphoteric cyclodextrins in CE	140
7.7 Concluding remarks	141
7.8 References	142
8. Enantioseparation of ofloxacin in urine by capillary electrokinetic chromatography using charged cyclodextrins as chiral selectors and assessment of enantioconversion	151
8.1 Introduction	152
8.2 Materials and methods	155
8.3 Results and discussion	157
8.4 Concluding remarks	162
8.5 Acknowledgements	163
8.6 References	163
9. Theoretical considerations for the application of molecular imprints for chemical analysis	167
9.1 Introduction	168
9.2 Theory	170
9.3 Separation methods	171
9.4 Ligand-binding assays	174
9.5 Sample pretreatment	176
9.6 Sensors	178
9.7 Summary	180

9.8 Acknowledgements	182
9.9 References	182
10. Spherical molecularly imprinted polymer particles: a new tool for molecular recognition in capillary electrokinetic separations	185
10.1 Introduction	186
10.2 Experimental	189
10.3 Results and discussion	191
10.4 Conclusions	199
10.5 Acknowledgements	199
10.6 References	200
11. Concluding remarks and future perspectives	203
A. Influence of the sample volume and the position of the electrode and the capillary-end in the sample vial on the electrokinetic injection	207
A.1 Introduction	208
A.2 Materials and methods	209
A.3 Results and discussions	211
A.4 Conclusion	215
A.5 References	215
Samenvatting	217
List of publications	221
Dankwoord	223
