

RIJKSUNIVERSITEIT GRONINGEN

Directed Evolution of a Cephalosporin Acylase

*Changing the substrate specificity of the
industrially relevant glutaryl acylase
from Pseudomonas SY-77*

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 28 mei 2004
om 14.45 uur

door

Ludwina Gerharda Otten

geboren op 2 november 1972
te Zuidwolde (Dr)

Promotor: Prof. dr. W.J. Quax

Copromotor: Dr. R.H. Cool

Beoordelingscommissie: Prof. dr. L. Dijkhuizen
Prof. dr. H.J. Haisma

Marjon Otten

The research described in this thesis was performed at the department of Pharmaceutical Biology (University of Groningen, The Netherlands), and was funded by STW, which is part of the Dutch Organisation for Science (NWO) under contract number GBI.4707.

Printed by Ridderprint Offsetdrukkerij BV (Ridderkerk, The Netherlands)

Table of contents

Chapter 1.	General introduction	9
Chapter 2.	Altering the substrate specificity of cephalosporin acylase by directed evolution of the β -subunit	25
Chapter 3.	Mutational analysis of a key residue in the substrate specificity of a cephalosporin acylase	41
Chapter 4.	Analysis of a substrate specificity switch residue of cephalosporin acylase	53
Chapter 5.	Selection of multiple mutated cephalosporin acylases with modified substrate specificity	63
Chapter 6.	Summary, general discussion and perspectives	81
