The early stages of planet formation: how to grow from small to large

Proefschrift

ter verkrijging van het doctoraat in de
 Wiskunde en Natuurwetenschappen
 aan de Rijksuniversiteit Groningen
 op gezag van de
 Rector Magnificus, dr. F. Zwarts,
 in het openbaar te verdedigen op
 vrijdag 10 oktober 2008
 om 14.45 uur

door

Christiaan Wessel Ormel

geboren op 6 juni 1981
 te Tunis, Tunesië

Promotores : Prof. dr. A. G. G. M. Tielens
Prof. dr. M. C. Spaans

Beoordelingscommissie : Prof. dr. J. Blum
Prof. dr. L. B. F. M. Waters
Prof. dr. S. Zaroubi

Contents

Chapter 1: Introduction	9
1.1 Chronology of the planet formation process	12
1.2 Important Concepts	21
1.2.1 The protoplanetary disk: structure	21
1.2.2 Dust microphysics: sticking, restructuring and fragmentation	29
1.2.3 The solar system: meteorites	33
1.2.4 Coagulation: modeling	35
1.3 This thesis	36
Chapter 2: Dust coagulation in protoplanetary disks	39
2.1 Introduction	40
2.2 Collision model	42
2.2.1 The turbulent protoplanetary disk	43
2.2.2 Porosity of agglomerates	45
2.2.3 The collision model	48
2.2.4 Porosity increase in the PCA and CCA limits	52
2.3 Monte Carlo Coagulation	55
2.3.1 Outline	55
2.3.2 Implementation	57
2.3.3 Tests	58
2.4 Results	61
2.4.1 Application to a protoplanetary disk	61
2.4.2 Particle growth and compaction	62
2.5 Discussion	67
2.6 Conclusions	72

Chapter 3: Particle relative velocities in turbulence	73
3.1 Introduction and outline	73
3.2 Definitions and previous work	74
3.3 Results	76
3.3.1 k-space approach	76
3.3.2 t-space approach	77
3.3.3 The role of v_{sys} : eddy-crossing effects	80
3.3.4 Limiting solutions	82
3.3.5 Contour plots	84
3.4 Conclusions	85
3.A A more accurate closed-form solution for v_p and all related velocities . . .	85
3.B Derivation of Eq. (3.25)	88
Chapter 4: Co-accretion of chondrules and dust in the solar nebula	91
4.1 Introduction	92
4.2 Model	95
4.2.1 Outline	95
4.2.2 The turbulent nebula	96
4.2.3 Collisions between dust-rimmed chondrules	102
4.2.4 Evolution of the internal structure	110
4.2.5 Collisional scenario	114
4.3 Monte Carlo coagulation	114
4.4 Results	116
4.4.1 Individual model runs	117
4.4.2 Parameter study	120
4.4.3 Importance of fragmentation	123
4.5 Discussion	125
4.5.1 Collective effects in a settled layer	125
4.5.2 Dust rim and matrix	128
4.6 Summary	132
Chapter 5: High dynamic range Monte Carlo	135
5.1 Introduction	136
5.2 The grouping algorithm	141
5.2.1 The Monte Carlo code	141
5.2.2 The grouping algorithm	144
5.2.3 Choosing the zoom factors	148
5.2.4 (De)magnification	149
5.2.5 Grouping Summary	149
5.3 Results	150
5.3.1 Test case I: the sum kernel	151
5.3.2 Test case II: the product kernel	154
5.3.3 Strong Runaway kernels	156
5.3.4 Fragmentation	160
5.4 Summary and discussion	163

5.4.1	Merits of the Method	163
5.4.2	Astrophysical implications	165
5.A	Grouped collision rates	166
5.B	Outline Monte Carlo Program	168
Chapter 6: Dust coagulation and fragmentation in molecular clouds		173
6.1	Introduction	174
6.2	Density and velocity structure of molecular clouds	176
6.2.1	Working model	178
6.2.2	Relative velocities between dust particles	179
6.2.3	Particle sticking, restructuring and fragmentation	180
6.3	Collision model	183
6.3.1	Collision setup	183
6.3.2	Collision recipe: an overview	186
6.3.3	Porting the recipe to a Monte Carlo model	187
6.3.4	Relation between a_{out} and a	188
6.3.5	Parameter space and normalizations	190
6.3.6	Hit and stick	191
6.3.7	Local recipe	192
6.3.8	Global recipe	193
6.3.9	The recipe's manual	196
6.4	The Monte Carlo program	197
6.4.1	One collision cycle	198
6.5	Results	202
6.5.1	The standard model	203
6.5.2	Parameter study	210
6.6	Assessment of the collision recipe	214
6.6.1	Bouncing	215
6.6.2	Size distribution of grains	215
6.6.3	Irregular particles	216
6.6.4	Structure of particles	217
6.6.5	The tabular format	217
6.7	Discussion	217
6.8	Conclusions and outlook	221
6.A	The collision recipe format	222
Chapter 7: Conclusions and outlook		225
7.1	The Monte Carlo model	225
7.2	The internal structure of particles	226
7.3	Turbulence	227
7.4	The meter size barrier	227
