

List of Figures

1.1	Bifurcation diagram of growth rates	34
1.2	Size-rate dynamics; $\rho > 0, \theta > 0$	36
1.3	Size-rate dynamics; $\rho > 0, \theta < 0$	38
1.4	Size-rate dynamics; $\rho < 0, \theta < 0$	40
1.5	Size-rate dynamics; $\rho < 0, \theta > 0$	41
2.1	Distribution of the stochastic rates	60
2.2	Phase space of stationary regimes	65
2.3	Realizations of noisy rate dynamics	66
2.4	Size of populations under stochastic rates	70
3.1	Evolution of a trait with arbitrary initial allele frequencies	81
3.2	Equilibrium values of the observables	95
3.3	Dynamics of the mean trait with a single locus; directional selection and $N\mu > 1/4$	99
3.4	Dynamics of the mean trait with a single locus; directional selection and $N\mu \sim 1/4$	100
3.5	Dynamics of the mean trait with a single locus; directional selection and $N\mu < 1/4$	102
3.6	Dynamics of the mean trait with a single locus; directional selection and changing μ	103
3.7	Dynamics of a polygenic trait with unequal effects	104

3.8	Accuracy of the dynamics of traits with unequal effects	105
3.9	Polygenic trait under fluctuating selection	106
3.10	Polygenic trait under rapidly fluctuating selection	106
3.11	Mismatch of the max-entropic distribution	108
3.12	Accuracy of the dynamics at low μ	111
3.13	Dynamics of polygenic traits at low $N\mu$	113
4.1	Evolution of genetic variances with distinct mutation rates	134
4.2	Drift and sampling on the \mathcal{G} -matrix	139
5.1	Distributions of allele frequencies	153
5.2	Adaptive landscapes	159
5.3	Fisher's fundamental theorem with drift	161
6.1	Genetic effects used in the \mathcal{G} -matrix computations	172
6.2	Indirect selection and \mathcal{G} -matrix evolution	174
6.3	Apparent stabilizing selection and \mathcal{G} -matrix evolution	176
6.4	Effects of pleiotropy over selection-mutation-drift balance	179
6.5	Effects of pleiotropy over \mathcal{G} 's evolutionary dynamics	180
6.6	Error in the \mathcal{G} -matrix's evolution	182
6.7	Averages and expectancies of \mathcal{G}	183
7.1	Dynamics of the mean trait with a single locus; stabilizing selection	199
7.2	Dynamics of the mean trait with a single locus; stabilizing selection with shifted optimum	200
7.3	[Dynamics of the mean trait with a single locus; stabilizing selection with shifted optimum at low $N\mu$]	202
7.4	Dynamics of the mean trait with a single locus; stabilizing selection with shifted mutation rates	203

7.5	Dynamics of the mean trait with a single locus; stabilizing selection with shifted optimum and Low $N\mu$	204
7.6	Dynamics of the mean trait with a single locus; directional selection with dominance	205
7.7	Genetic variance of polygenic traits under stabilizing selection	210
7.8	Tri-locus trait under stabilizing selection with a shifted optimum	211
7.9	Macroscopics of polygenic traits under stabilizing selection (equal effects)	215
7.10	Polygenic trait under stabilizing selection with a shifted optimum (equal effects)	217
8.1	Life-history invariants related to growth parameters	233
8.2	Evolution of population patterns	235
B.1	Distribution of allele frequencies with wrong base distributions	293
C.1	Bootstrap distributions of the traits	301
C.2	Bootstrapped average maxima	302
C.3	Number of pleiotropic structures	304
C.4	Pleiotropic structures	307
C.5	Distribution of selection coefficients (β)	308
C.6	Distribution of the eigenvalues of \mathcal{G}	309
